Level up your **CAREER**

The PMBA Business Analysis Program has been developed to equip you with the practical, evaluative and analytical skills to allow you build a career as a future manager or consultant, to influence and develop strategies and performance within organizations.

The program includes courses that build on the concepts of the International Institute of Business Business Analysis (IIBA™), Business Analysis Body of Knowledge (BABOK) guide and cover important topics like collaboration, testing and quality assurance, and requirements analysis.

By the end of this Program, you will be equipped with a toolbox of best practices and knowledge to guide you in your day-to-day work process.

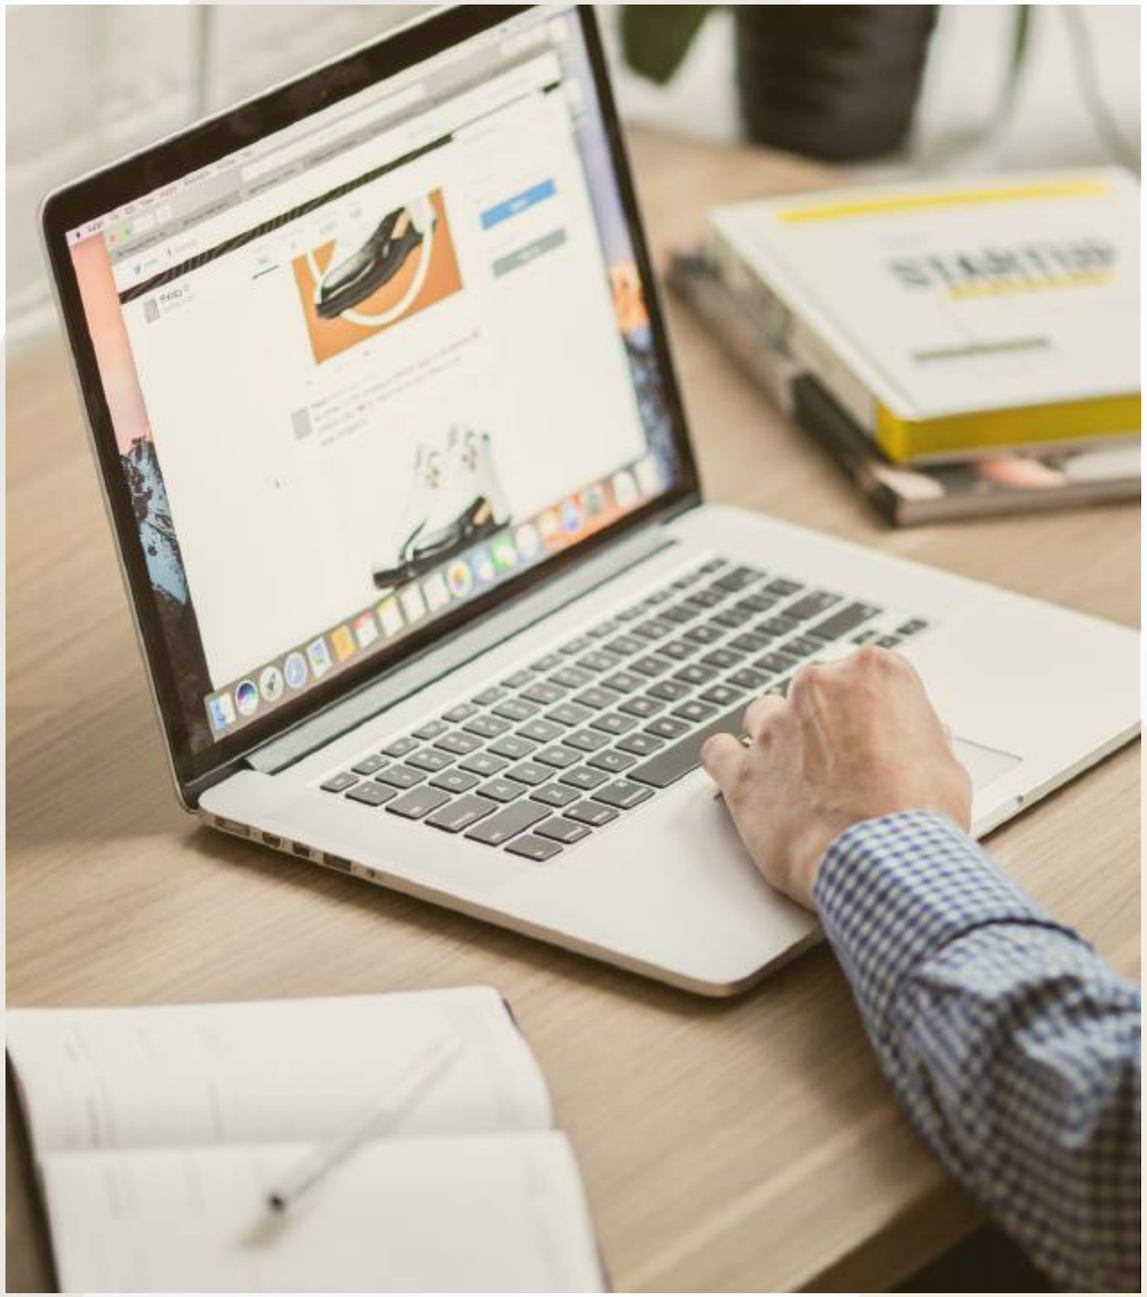
PROGRAM OUTLINE

Introduction to BA Training Program.

In this course, you will be introduced to the IIBA®, Business Analysis Body of Knowledge® (BABOK®) and the first knowledge area: Business Analysis Planning and Monitoring.

BA Elicitation and Collaboration

This course will teach you how to gather information and understand the needs of a business.
BAs use elicitation and collaborative techniques to achieve a shared understanding of business analysis information.



Eliciting User Requirements

In this course, you will learn the process of determining what the customers actually need. Eliciting requirements is a system used to document important information so that the analyst can later write a more formal requirements document.

Requirments Analysis (and Design Definition)

This lesson walks through several techniques using real life case studies as examples in this course. It is absolutely essential that business requirements are thoroughly analyzed, during their collection and throughout the project's life cycle.

Requirements Life Cycle Management

This course outlines the activities carried out by a business analyst to manage and sustain requirements from initialization through final execution. Monitoring, planning, analyzing, controlling, and communicating organizational requirements are all part of the process.

Solution Evaluation

In this course, you will learn how to evaluate solutions by defining and measuring its performance. A Business Analyst converts the measurements into basic statistics about the solution's performance. These statistics assist in determining whether the solution's value corresponds to the value that an organization has in mind.

COURSE PARTICIPANTS

- Business Analysts from all industries
- Business Analysts and Managers who are new to the position
- Business and systems analysts who lack formal training
